**DETAILED ACTION**

1. This communication is in response to amendment filed 9/15/2004.

***Response to Amendment***

2. Claim 1 has been amended per request.
3. Claims 1-7 are pending and have been allowed.

***Drawings***

The drawings are objected due to certain defects as explained below.

Figures 1,11,23, 27B-28,30, 32-34 do not have proper margins. See 37CFR 18.4(g).

Figures 6A, 7-10, 12-18 and 21 have graphical content not legible. See 37 CFR 1.48(p)

***Reasons for Allowance***

4. The following is an examiner's statement of reasons for allowance:

The claimed inventions pertain to a system for performing a switch auction utilizing financial portfolios related to at lease two traders.

The following prior art references have been deemed most relevant to the allowed claim(s):

Donner (EP 0 512 702 A2) teaches an automated currency market trading system for matching bids and offers and for performing credit filtering and credit line checks of one or both counter-parties to a trade. A central computer matches bids and offers based on the similarity or their parameter values.

Lupien (US 5,101,353) discloses a system wherein a formerly large, relatively static portfolio is manipulated (i.e., securities therein are sold and other securities are purchased) to take on risk in order to earn additional profits from spreads between offered prices and normal prices.

Donner and Lupien as discussed above as the Closest Prior art of record fails to teach or suggest a system for performing a switch auction utilizing financial portfolios related to a first trader and a second trader, which comprises the following feature:

Means for matching offsetting risk positions of the first and the second traders using a relative risk positions and an auction price, and based credit preferences of the first and the second traders, wherein the system comprises means for calculating the relative risk positions for the first and the second traders based on financial instrument portfolios.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### **Conclusion**

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Dembo (US Pat. 5799287) discloses a method and apparatus for determining an optimal replicating portfolio for a given target portfolio involves an initial step wherein a user defines a target portfolio to be replicated, a set of available market instruments from which the replicating portfolio may be created, a set of future scenarios, a horizon date, and a minimum profit to be attained. A representation of the trade-off between risk and expected profit for some arbitrary replicating portfolio is then determined and used to calculate a maximum risk-adjusted profit.

Atkins (US Pat. 5644727) discloses a method and apparatus which provides an integrated financial product package together with a system of exchange, investment and borrowing that

incorporates personal financial analysis, planning and management.

Garman (EP 0 790 568 A1) teaches a system and method for determination of incremental value at risk for securities trading.

Litterman et al.; Managing Market Exposure, Journal of Portfolio Management, v22, n4, p32 (16), summer 1996 discloses a model for evaluating asset correlations and volatilities to enhance portfolio management and computing investment performance during market rallies. The model was applied in determining and market risk in global bond fund management and global bond trading scenarios.
